HEMANT KUMAR

AI / LLM Engineer | Founder, Mohesu Enterprises

Rohtak, Haryana, India • Open to opportunities

github.com/heman4t linkedin.com/in/heman4t t.me/heman4t mohesu.com

Software engineer and founder with 14+ years across web, mobile, automation and infrastructure. Builds Python-based AI services, MCP integrations, local RAG and agent evaluations, with hands-on experience in self-hosted inference and AI-enabled business workflows.

CORE EXPERTISE

AI & agents: LLMs, MCP, RAG, semantic search, prompt engineering, OpenAI and Anthropic SDKs, Ollama, multi-agent workflows, retrieval evaluations.

Engineering & delivery: Python, FastAPI, Pydantic, PostgreSQL, Redis, Elasticsearch, TypeScript, Docker, Ansible, Linux, CI/CD, pytest, ruff, pyright.

SELECTED PROJECT EXPERIENCE

Source-bound prediction engine | Independent product

March 2026 - present

- Built a Vedic-astrology prediction engine with Python/FastAPI/PostgreSQL and a 100+ tool MCP server, connecting agents to layered data, domain queries, orchestration and prediction workflows.
- Developed an offline semantic-memory MCP server using Ollama embeddings and an allow-listed corpus. Retrieval fails closed; queries and documents stay local.
- Created 34 deterministic evaluation cases with Prime Intellect verifiers v1 to test source fidelity, decoy rejection and missing-source handling; tool-use credit is grounded in execution traces.
- Applied citation-validation gates, architecture checks and an 11k+ test suite. Coordinated Claude Code, Codex and Gemini through isolated worktrees and recorded decisions.

HariDream | AI-enabled lending and ERP platform

2025 - 2026 | Main author across the application stack

- Integrated Meta's WhatsApp Cloud API with ERPNext for messaging, templates, broadcasts, webhooks and lead workflows; added OpenAI replies using conversation history and lead context.
- Built OpenAI Vision document extraction for KYC with pattern validation, private attachments and retention rules. Added prompt guardrails and human handoff for customer-facing replies.
- Automated Meta Marketing API audience sync from 10M+ bureau records and ERP leads using hashed phone identifiers, idempotent deltas, batching and rate-limit backoff.
- Built ERP access to 74M Elasticsearch applicant records with role-scoped permissions, PII masking and audit logs; exposed ERP operations through an MCP server.

AVS Holidays | Self-hosted speech analytics

January - June 2025 | Inference and AI services

- Built speech-analysis services using NVIDIA Canary-1B ASR and silero-vad, backed by a FastAPI/Redis job pipeline and GPU inference deployed through Docker Compose.
- Processed multi-channel call recordings into transcripts, sentiment and toxicity flags, summaries, topics and suggested next steps using PyTorch and Hugging Face tooling.

Infrastructure automation | Client platforms

2022 - present | Main author

- Developed a 2,100+ commit Ansible codebase for staging and production Linux fleets: Docker, Nginx/Apache, TLS, PHP-FPM, UFW, Prometheus and Grafana.

Web, data and developer tooling | Selected delivery

2025 - 2026

- Built a UK travel platform with Cloudflare Workers, Hono, D1/Drizzle and Next.js; validated delivery with Vitest, Playwright and Lighthouse CI.
- Developed lending-data pipelines with Python, Pydantic and Playwright, merging and enriching feeds in Elasticsearch; built a Qt desktop syncer with upload validation and retry guards.

OPEN SOURCE

- Main author of combine-with-context, a TypeScript/Kotlin extension for VS Code and JetBrains that exports repository context for LLM workflows; published on three extension marketplaces.
- Contributed two merged PRs to agent-primer to harden CodeGraph MCP installation and recovery. Earlier merged contributions include flutter/samples and OpenFace.

EARLIER ENGINEERING

Built a retrofittable wireless home-automation system with Teensy, XBee, Raspberry Pi and openHAB, plus an Arduino sensor-network framework (2014 - 2016). Broader experience includes Flutter, Angular, PHP/Zend, WordPress and Selenium automation.
